The Great Fiji Shark Count Offshore Waters

Habitat Types:

1. High Profile Reef:	Most coral heads rise four or more feet off the bottom.
2. Low Profile Reef:	Most coral heads average less than four feet off the bottom.
3. Sloping Dropoff:	Angled slope dropping into open water.
4. Wall:	Sheer drop-off of over 25 feet that faces open water.
5. Ledge:	Single or few sharp drops (like steps) of three or more feet may or may not face open water
6. Grass:	Sea grasses are the predominant feature
7. Sand:	Mostly sand bottom
8. Rubble:	Broken dead coral, rock, boulders over most of the bottom.
9. Artificial:	Ship wrecks, dumped debris or other artificial habitats.
10. Open Water:	Deep water where the bottom is not visible.
11. Passage:	Channel between open ocean and inner reef, steep sided

Please draw or attach a sketch map of the area you usually visit, with usual fishing grounds or boating route marked and named or numbered.
